HISTORY

y

Infosystems was founded on February 22, 1995 under the name DSMI Corp. Originally a privately funded company, DSMI Corp. changed its name to Patient Infosystems, Inc. and became a publicly traded corporation in 1996. Currently, Patient Infosystems trades under the symbol OTCBB: PATY.

Patient Infosystems was originally founded as a pure disease management company. Over time, through expansion of its organic product line along with several acquisitions (click to read more), Patient Infosystems has evolved to offer a comprehensive portfolio of health management products and services, including a 24/7 nurse help line, chronic condition management, case management, utilization management, maternity management, smoking cessation and preventive care reminder programs.

Additionally, in 2000, Patient Infosystems began offering a related service line in the area of Innovation and Improvement. This initiative involves providing leadership, training and technical assistance directly to providers in implementing clinical registries, redesigning clinical office practice, and in applying the Planned Care Model to improve management of patients with chronic conditions.

Patient Infosystems maintains its Corporate Office and one Operations Center in Rochester, NY, as well as an Operations Center in Dallas, TX and another in Las Vegas, NV. Multiple sales offices are located throughout the United States.
